

# Table of Contents

<b>F.I.R.E.</b>	<b>xiii</b>
<b>Foreword</b>	<b>xv</b>
<b>Preface</b>	<b>xvii</b>

## Chapter 1

### Designing refractory castables

<b>1. Introduction</b>	<b>1</b>
<b>2. Refractory castables' features</b>	<b>3</b>
<b>3. Book content overview</b>	<b>10</b>
3.1. Fundamentals on particle dispersion	10
3.2. Particle size distribution and packing design	11
3.3. Binder additives and their setting mechanisms	11
3.4. Installation techniques, highlighting the shotcrete method	12
3.5. Curing and drying behavior and their optimization	13
3.6. Magnesia hydration and its effect on the performance of MgO-containing compositions	14
3.7. Spinel-containing alumina-based castables	15
3.8. Carbon-containing castables	15
3.9. Designing the microstructure for specific applications	16
<b>4. Final remarks</b>	<b>17</b>
<b>5. References</b>	<b>17</b>

## Chapter 2

### Fundamentals on particle dispersion

<b>1. Introduction</b>	<b>21</b>
<b>2. Driving force for agglomeration</b>	<b>22</b>
<b>3. Dispersion mechanisms</b>	<b>25</b>
3.1. Electrostatic mechanism	25
3.2. Steric mechanism	31
3.3. Electrosteric mechanism	36

*Contents*

<b>4. Dispersants</b>	<b>40</b>
4.1. Dissociation and density of charged sites	40
4.2. Adsorption ability	45
4.3. Polyelectrolyte chain length and secondary effects	56
<b>5. Matrix dispersion and castable rheology</b>	<b>58</b>
5.1. Stability maps	58
5.2. Rheological aspects	61
5.3. Workability and setting behavior	69
<b>6. Coagulation mechanisms applied for refractory castable consolidation</b>	<b>75</b>
6.1. Direct coagulation casting (DCC)	75
<b>7. Final remarks</b>	<b>81</b>
<b>8. References</b>	<b>82</b>
<b>9. Further reading</b>	<b>90</b>

**Chapter 3**

**Particle size distribution and packing design**

<b>1. Introduction</b>	<b>91</b>
<b>2. Particle size distribution (PSD) effect on packing</b>	<b>92</b>
2.1. Particle packing models	93
2.2. Main factors affecting particle packing	98
<b>3. Particle size distribution role in castable processing and properties</b>	<b>108</b>
3.1. Mixing ceramic particles	108
3.2. Rheological behavior	117
3.3. Mechanical strength improvement based on packing optimization and raw materials selection	130
3.4. Packing effect on permeability	135
3.5. Polymeric fiber addition and its effect on PSD	144
3.6. Creep behavior	146
<b>4. Final remarks</b>	<b>147</b>
<b>5. References</b>	<b>149</b>
<b>6. Further reading</b>	<b>155</b>

## Chapter 4

### Refractory castable binders

<b>1. Introduction</b>	<b>157</b>
<b>2. Hydraulic binders</b>	<b>161</b>
2.1. Calcium aluminate cements (CACs)	161
2.2. Hydratable alumina (HA)	176
2.3. Experimental techniques used to assess the binder hydration behavior and setting	179
2.4. Effect of castable's matrix and additives on binder hydration	191
2.5. Evolution of CAC and HA-bonded castables' properties during the curing stage	205
<b>3. Chemical binders (phosphates)</b>	<b>211</b>
3.1. Bonding mechanisms	213
<b>4. Colloidal binders</b>	<b>217</b>
4.1. Colloidal silica (CS)	219
4.2. Colloidal alumina (CA)	235
<b>5. Final remarks</b>	<b>241</b>
<b>6. References</b>	<b>245</b>

## Chapter 5

### Installation techniques: focusing on shotcreting

<b>1. Introduction</b>	<b>257</b>
<b>2. Evolution of installation techniques: why and when to select shotcrete?</b>	<b>261</b>
<b>3. Shotcreting castables</b>	<b>270</b>
3.1. Dry and wet mixes	272
3.2. Material requirements and operational aspects	279
<b>4. Final remarks</b>	<b>304</b>
<b>5. References</b>	<b>309</b>

**Chapter 6**  
**Drying behavior and design of refractory castables**

<b>1. Introduction</b>	<b>317</b>
<b>2. Drying behavior of refractory castables</b>	<b>320</b>
2.1. General concepts and typical drying steps	320
2.2. Drying schedules and scale-up effect	328
2.3. Castables' design	342
<b>3. Roles of polymeric fibers to enhance permeability</b>	<b>373</b>
3.1. Geometrical aspects	377
3.2. Effects on castable's rheology	382
3.3. Fiber types	387
3.4. Polymeric and metallic fibers: mechanical reinforcement	393
<b>4. Roles of aluminum powder</b>	<b>399</b>
<b>5. Final remarks</b>	<b>408</b>
<b>6. References</b>	<b>411</b>
<b>7. Further reading</b>	<b>418</b>

**Chapter 7**  
**Magnesia-containing refractory castables**

<b>1. Introduction</b>	<b>419</b>
<b>2. Magnesia hydration mechanisms</b>	<b>422</b>
<b>3. Magnesia hydration effects on refractory castables</b>	<b>427</b>
3.1. Selecting the most suitable magnesia source	427
3.2. MgO hydration effect on castable processing	436
3.3. Interactions between magnesia and different castables' raw materials	447
<b>4. Alternatives to inhibit magnesia hydration</b>	<b>463</b>
<b>5. <i>In situ</i> magnesia hydration as a binding agent</b>	<b>469</b>
<b>6. Final remarks</b>	<b>486</b>
<b>7. References</b>	<b>487</b>

## Chapter 8

### Spinel-containing alumina-based refractory castables

<b>1.</b>	<b>Introduction</b>	<b>497</b>
<b>2.</b>	<b>Formulation design using pre-formed spinel</b>	<b>503</b>
	2.1. General features	503
	2.2. <i>Post-mortem</i> evaluation of a pre-formed spinel composition	509
	2.3. Mastering the microstructure to optimize the pre-formed spinel castable properties	513
<b>3.</b>	<b>Formulation design with <i>in situ</i> spinel formation</b>	<b>530</b>
	3.1. Mechanism of <i>in situ</i> spinel formation	531
	3.2. Mastering the microstructure to optimize the spinel-forming castable properties	537
<b>4.</b>	<b>Final remarks</b>	<b>577</b>
<b>5.</b>	<b>References</b>	<b>579</b>
<b>6.</b>	<b>Further reading</b>	<b>591</b>

## Chapter 9

### Carbon-containing refractory castables: design, properties and applications

<b>1.</b>	<b>Introduction</b>	<b>593</b>
<b>2.</b>	<b>Raw materials for carbon-containing castables</b>	<b>595</b>
	2.1. Carbon sources	596
	2.2. Other components	602
<b>3.</b>	<b>Basic features for carbon-containing castable design</b>	<b>603</b>
	3.1. Water wettability and dispersion of graphite	603
	3.2. Carbon oxidation	622
<b>4.</b>	<b>Applications</b>	<b>650</b>
<b>5.</b>	<b>Final remarks</b>	<b>655</b>
<b>6.</b>	<b>References</b>	<b>656</b>
<b>7.</b>	<b>Further reading</b>	<b>664</b>

## **Chapter 10**

### **Designing the microstructure for specific applications**

<b>1. Introduction</b>	<b>665</b>
<b>2. Nano-scaled materials</b>	<b>668</b>
2.1. Nano-carbon	669
2.2. Nano-oxides	677
<b>3. Bio-inspired refractories</b>	<b>694</b>
<b>4. Transient liquid phase-containing refractory systems</b>	<b>699</b>
4.1. Boron-based sintering additives	700
<b>5. Final remarks</b>	<b>710</b>
<b>6. References</b>	<b>711</b>
<b>7. Further reading</b>	<b>719</b>
<b>Index</b>	<b>721</b>
<b>Authors' Profiles</b>	<b>733</b>
