

VELCO's New Remote Access Module

VELCO's new Remote Access Module has been presented at METEC 2019 in Dusseldorf/DE.

The access is given through a cloud provided by VELCO. For the machine, only a country-specific SIM-card at the place of use is needed to get access to various machine data – simply with a smartphone, table or PC.

Customer's benefits are as follows:

- information about machine status and operation hours;
- quick fault diagnosis by the support staff;
- cost-effective – as only small data volumes are exchanged;

- no interference of the company network (data protection).

Based on prior verification, the VELCO remote access module can also be retrofitted to existing VELCO machines and machines of other brands.
